Ever Kick a Battery to Pieces?

Of course you wouldn't do it intentionally. No good driver would.

But a lot of experienced drivers of trucks and passenger cars have kicked their batteries to pieces without even knowing it by banging on the starting button when the motor didn't take hold at once.

Perhaps the trouble was just thick oil.

Maybe water had accumulated in the carburetor.

Possibly a connection had worked loose.

But whatever it was the battery had to suffer.

You can get far longer life from your battery, and incidentally from your whole car if you'll always be sure where the trouble is and correct it just as soon as you locate it.
